

# **iolink direct**

## *Control your phone with your Mac!*

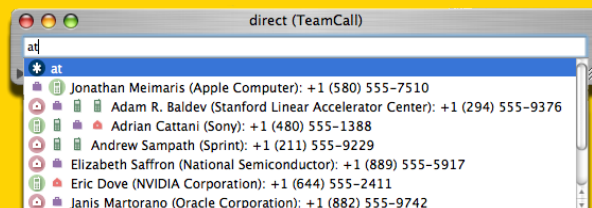

**NEW: Works with virtually any PBX**

### *See who's calling*

At home or at the office, **iolink direct** is the missing link between your Mac and your phone. Architected for network use, **iolink direct** works with both PBX systems and landline phones – and it's brought to you by the leading experts in Mac telephony.

### *Instantly access all your contacts*

**Compatible with virtually any PBX system**

**Download your FREE trial – turn page to find out more.**

## Introducing ilink direct: Seamless Telephony Integration

You use your Mac to organize your life and your work. And now you can take control of your phone too. With *direct* you can dial any number stored on your Mac – whether it's in your Address Book, in FileMaker or simply in an e-mail. **Use your Mac to screen incoming calls** – with handy caller ID windows so you always know in advance who's on the other end of the line. *direct* works with a wide range of landline phones. But the **real power of *direct* is unleashed in networked environments**, fitting right into your office phone system thanks to Asterisk support and our advanced TeamCall middleware.\* Download your free trial today and see what *direct* can do for you.

### Core features at a glance:

- Supports a wide range of telephones and PBX systems\*
- Fast, intelligent search engine finds the number you need
- Caller ID window indicates incoming call
- AppleScript support – integrate with your favorite scriptable applications
- Activate scripts with incoming calls – e.g. call up customer information in FileMaker
- Control multiple phones simultaneously
- Save frequently dialed numbers in the Mac OS X Dock menu
- Bonjour-based Local Users window shows who is currently making a call on your local network
- Call pick-up – take colleagues' calls when they are unavailable\*\*\*

### Innovation for integration

*direct* comes to you from the leaders in Computer Telephony Integration (CTI) on the Mac. *direct* doesn't just connect your Mac to your phone: it seamlessly integrates with your favorite software, the Services menu, and the Mac OS X Dock to make your phone an **extension of your whole Mac experience**. AppleScript support enables you to add *direct* functionality to any scriptable application – and you can share useful scripts with other users on our website.

### Intelligent search: Less seek, more find

*direct* gives you instant access to your locally stored contacts as well as network-based LDAP directories. The search engine also learns who you call most, so **your closest contacts are always at your fingertips**.

### Productivity for professionals

*direct* is brought to you by the leaders in Mac-based CTI. ilink has **fifteen years' experience of delivering integrated solutions** for corporate clients – experience evident in *direct* and its network-based companions, TeamCall Server and TeamCall Express\*\*. These advanced middleware solutions enable you to use *direct* with a huge range of PBX systems – from large-scale corporate installations to **virtually any TAPI-compatible system**. With Asterisk support also included, everyone in the office can benefit from the convenience and productivity that *direct* provides. And thanks to **advanced features** such as call pick-up – enabling you to take colleagues' calls when they are unavailable – **your customers benefit too**\*\*\*.

### About ilink

ilink has been a leading provider in CTI products and solutions since 1990. Our core competence is developing the tools to integrate PBX systems with IT infrastructure in heterogeneous software/hardware environments. We provide clients around the world with custom-made solutions that suit their budgets.
